Response

Responses are received in JSON. The response object will contain several top-level elements such as RESULT, ERRORS, RECORD, and META. Failed responses will have ERRORS and the RESULT will be "failed". Successful responses will not have any ERRORS and the RESULT will be "success". Additionally, successful responses will have the RECORD element filled with the internal lead id, received time, and any other optional messages. The lead id is also duplicated in the META record. The META record is reserved for future use.
